

Chelsea ReadyFlow™ 60

Chelsea ReadyFlow™ 60 in Burnt Elm

Protecting our planet for tomorrow's generation

Summer droughts, mild winters and flash flooding. These are all symptoms of our ever changing climate. With Chelsea ReadyFlow™ 60 permeable paving you can protect your environment today, to build a brighter future for tomorrow. Chelsea ReadyFlow™ 60 has a traditional tumbled appearance ideal for gardens and driveways alike, but with the specially designed spacing of Chelsea ReadyFlow™ 60 the paving allows a controlled flow of water to be channelled away from the surface into the subgrade or drainage system whilst maintaining the integrity of the design.

Please refer to pages 34 & 35 for information on how permeable paving protects the environment.
